

POP ROCK MIDI Pack - performed by Bastian Emig

At last! The song is finished, now it's just a matter of recording it perfectly! But what is *perfect*? "Perfect" sounds like programmed... like quantized, like "basically right", and yet completely wrong...

But you are looking for a "*different perfect*" - more like a *blood-sweat-and-tears-perfect*... where the beat is a bit more up front or rather laid-back? When a fill lasts just a μ longer than the bar actually allows, but it's just about right and therefore ... perfect. It lives and expresses exactly what you wanted to say with your song - it's.. *musically perfect* - that's more like it. Well, this is exactly your session.

Klangmacht - German for "The power of sound"

True to our name, we create larger-than-life instruments. We capture the momentum of spirit, sound and craftsmanship with striking precision and a good scoop of dirt so that you can unleash it in your own creative outburst.

- **Spirit: Bastian Emig** - Drummer of Van Canto and studio and live musician for countless productions from Punkrock to Metal is one of the most energetic and musical drummers of our time. His dynamic style and great joy of playing inspire bands and audiences alike. We locked him up and got everything out of him. He was drumming for his life just so you could get the whole essence of his performance into your music.
- **Sound: YOUR Sound** - Our MIDI Packs are "only" the gasoline - for which car is your decision! Our Klangmacht drum plugins, such as the [Wild Boar](#) Set with which this MIDI pack was recorded, are of course ideal. Our packs even include their own Klangmacht mapping. But you can also play this MIDI pack with any other Drum Plugin. Each MIDI Pack contains a General MIDI Map (GM). You may have to adjust a

few velocity values here and there because the trigger sensitivity of the respective manufacturers vary a little, but the drummed performance is guaranteed in any case.

- **Craftmanship: The "Muse"** - Well, where does it come from, the dear inspiration? Mostly from the spinal cord, but rarely on demand. But you can lure it out of its reserve a little. For example with exciting drum beats or an inspiring sound.

And suddenly it's there - out of nowhere it's there and demands that you drop everything and immediately pick up the guitar or have a microphone ready!

We cannot guarantee such moments, but we can promise you that using Klangmacht plugins and MIDI packs will significantly increase the likelihood of them happening - just because we put a lot of heart and soul into it. And heart and soul is always a good prerequisite for getting something good out of it.

So get started.

What you get:

The Pop Rock MIDI Pack contains a wealth of beats, fill ins and other song relevant parts that are of great value in any professional Pop- and Rock-production. It doesn't reinvent the wheel, but pays homage to a style that still dominates our radios. All files are designed for a classic drum set with three toms and several cymbals.

You'll find a lot of colorful bricks to build yourself a castle. They fit together and strengthen the character of your song as they come straight from the spinal cord of a thoroughbred drummer. That alone will take your song to the next level.

Here's what you get:

- 394 MIDI Files.
- 6 different tempi that can easily be stretched up to 35bpm. (BPM: 100, 117, 120, 125, 145, 170).
- Logical subdivision into impulses (backbeat, halftime, dotted etc.), instrumentation (HH, Ride, Crash...) or arrangement-relevant parts such as "Buildups" or "Pickups".
- Accurate adherence to audio-relevant trigger logic: e.g. snare notes lie on or before kick notes, fill ins are connectable with other MIDI parts, etc.
- Dynamic beats with ghost notes and accentuated climaxes.
- All files available in all common MIDI mappings.
- Really drummed and sweated in.
- Suitable for all Klangmacht drum plugins as well as for all other brands.

Focus on the essentials!

- It is important to note that the dynamic range of our beats is not determined by different velocity values alone. Every beat has its own way of hitting the stick on the drumhead. This means dynamics depend not only on the intensity of a drum beat, but also on where the drum is hit. In other words, it depends on how extensively a drum has been sampled. Klangmacht plug-ins are characterized by a great variety of articulation, for our plugins contain their own samples for such variants. Our MIDI Packs are designed accordingly. However, it is not a problem if your sample library does not support our variety of samples: Simply distribute them to the notes of existing samples of your favorite plugin and enjoy a killer performance.
- However, if you want to experience the full pleasure of our dynamic range, we recommend trying one of our plugins. Especially in combination with our sound, the articulation taken into account in the MIDI files comes into its own and can no longer be distinguished from a real drum performance.
- With Klangmacht we want to offer you tools that are solely dedicated to your creativity. No distractions from programming or engineering - just focus on the music and write your next killer track.

Stop fixing. Make music.
