

THE SCORE

UPDATE 1.1 INSTRUCTIONS

This is a brief overview of how to properly install and display The Score 1.1 in your Native Instruments software

Update The Score

Support

Technical Support

Downloads

Reselling our products

Please first use The Score 1.1 Updater for your operating system to update your Library data to the latest version. You can find the latest update in our support download area.

For Komplete Kontrol & Maschine Users: Rescan your library

Users who use Komplete Kontrol or Maschine for their Kontakt libraries must first rescan their product library list.

To do this, go to the Preferences of the respective program, find the Library tab and click the Rescan button.

Once you have done this, all The Score presets will be displayed and loaded correctly in the browser.

For Kontakt 7 Users: Re-adding your library in Native Access

To be able to display the new presets in the Kontakt 7 plugin, you must add the library in Native Access again.

First rename your library folder temporarily.
(e.g. The Score Library Temp)

Open Native Access and click the Refresh button.

THE SCORE

UPDATE 1.1 INSTRUCTIONS

Search for **The Score** under **INSTALLED**. Given you renamed the folder before, you should now see the product name and the **Repair** button.

Before clicking on **Repair**, please rename your library folder back to it's normal name (see example on the right)

Now go back to Native Access and click on **Repair** and browse for your library folder.

After you have re-added the folder and see "installed" in Native Access, you can now load the updated The Score 1.1 presets via the Kontakt 7 browser.
