

THE SCORE

UPDATE 1.2 INSTRUCTIONS

This is a brief guide on how to correctly install and display The Score 1.2 in your Native Instruments software.

Update The Score

Technical Support

Downloads

Reselling our products

Please use The Score 1.2 Updater for your operating system to update your Library data to the latest version.

You can find the latest update in our support download area.

After you have successfully completed the update, open The Score in Kontakt and check your version number on the Settings page, which you can access via the small wheel in the upper right corner.

Re-adding your library in Native Access (optional)

If you want the correct version number to be displayed in Native Access, you'll need to reinstall the library through Native Access

First rename your library folder temporarily. (e.g. The Score Library Temp)

Following that, open Native Access and uninstall The Score by clicking on the three dots next to it.

You'll receive a warning prompt. **IMPORTANT!** Please ensure you've renamed your folder before clicking on uninstall - otherwise, your entire library folder will be deleted!

Please ignore the following message "Path could not be found".

Uninstall

Are you sure you want to uninstall The Score?

Uninstalling a product may cause you to lose your work and settings, and some products might not work as expected.

Uninstall

THE SCORE

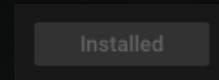

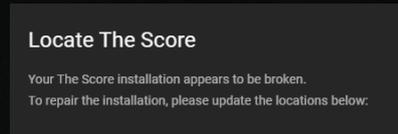

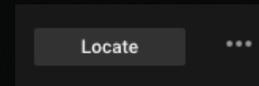

UPDATE 1.2 INSTRUCTIONS

Search for **The Score** under **Available**. Since you've uninstalled The Score, you should now see the product name along with the **Locate** button.

Before clicking on **Locate**, please rename your library folder back to its normal name (see example on the right)

Now go back to Native Access, click on **Locate** and search for your library folder.

The library has been successfully added if "installed" and the current version number 1.2.0 are displayed.
